

Warehouse Location Barcodes — Starter Set

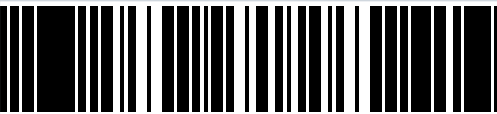

One label per existing Plant/Storage-Location combination already in your SAP master data (from T001L), covering the pallet, packing, and FG storage areas. Print these, stick them at each physical location, and load the same Werks/Lgort/LocCode values into ZSOL_LOC_MAST so the scan app recognizes them. For finer tracking (aisle/rack/bin level), add more rows to ZSOL_LOC_MAST with a suffix on LOC_CODE (e.g. PAST-A1, PAST-A2) and regenerate labels for just those codes.
