

KSQ Fiori Launchpad — Corporate Information Architecture

Your 50 working tiles are currently all sitting in one flat “My Home” list. That’s fine for testing, but it doesn’t scale and won’t read as a corporate-grade launchpad. This is a working plan to reorganize them into role-based Spaces, each holding one or more Pages broken into named Sections — the modern SAP model, using the Manage Launchpad Pages / Manage Launchpad Spaces apps already assigned to you. Generated 24 Aug 2026.

Why move off the flat “My Home” list

A single page with 50+ mixed tiles forces every user — a QC inspector, a packing clerk, a sales admin, a plant manager — to scroll past apps that have nothing to do with their job to find the two or three they actually use. A corporate launchpad instead gives each role its own Space: a short, curated home page with only the tiles that role needs, grouped under clear Section headers. No tile is deleted or duplicated in the backend — the same catalog tile can simply be placed on more than one Page, so a tile like Truck Master can appear on both the Master Data page and the Packing & Dispatch page without any extra configuration work.

Recommended structure — 6 Spaces

Each Space below becomes one entry in Manage Launchpad Spaces, containing one Page (built in Manage Launchpad Pages) with the listed Sections. Assign each Space to the PFCG role(s) of the team that owns it.

1. KEJRIWAL — Production & Quality

Audience: shop-floor / QC team. Assign to production and QC roles.

Section	Tiles
Batch & Process Operations	Batch Status, MTOS, Dispatch (Correction), WIP Batch Close, Cancel Production Confirmation
Quality Control	Raw Material QC, Post-Dyeing QC, Post-Winding QC
Process Analytics	Recipe Analysis, WIP Batch, Job Card

2. KEJRIWAL — Packing & Dispatch

Audience: warehouse / packing / logistics team. Assign to packing and dispatch roles.

Section	Tiles
Packing Operations	Packing List, Packing Units, Packing Register, Packed Stock, Checked / Packed By, Merge Details, Label Master, Packing Material Master
Dispatch & Logistics	Delivery Challan, Dispatch Register, Pallet Stock, Gate Pass, Gate Pass Register, Truck Master, Transport Code, Unassign Return Boxes, HU Inventory

3. KEJRIWAL — Sales & Compliance

Audience: sales, finance, and statutory-compliance team. Assign to sales/finance roles.

Section	Tiles
Sales & Contracts	Sales Document Status, Release Sales Order, Pending Contract, Customer Register, Sales Register, Account Grouping, Invoice Allocation
Statutory & Tax	GST Tax, E-Invoice/E-Way Bill, eDocument Cockpit, TDS Register, Credit/Debit Note, Upload Journal Entries
Procurement & Export	Purchase Register, PO Closure Register, Export Details, Export Register, Job_Work Challan

4. KEJRIWAL — Master Data

Audience: master-data administrators. Assign to a small admin/data-steward role only.

Section	Tiles
Production Masters	Schedule Master, Truck Master, Transport Code, Packing Material Master, Digital Signature
Reference Masters	Merge Details, Checked / Packed By, Gate Pass, Export Details

5. KEJRIWAL — Analytics & Management

Audience: plant/management leadership. Keep this Space deliberately short — a real dashboard, not a second copy of every register.

Section	Tiles
KPI Overview	Plant Dashboard, Dispatch Register, Packing Register, Sales Register, GST Tax, TDS Register
Operational Registers	Merge Analysis, Recipe Analysis, Job Card, HU Inventory, Export Register, Credit/Debit Note, Gate Pass Register, PO Closure Register

6. KEJRIWAL — Administration

Audience: Fiori/Basis admin only (you). Keep this off every other role's assignment list.

Section	Tiles
Launchpad Admin	Manage Launchpad Pages, Manage Launchpad Spaces

Build order

#	Step	Detail
1	Create the 6 Pages first	Open Manage Launchpad Pages → New Page for each Space above (e.g. “Production & QC”). Inside each Page, add the Sections listed, then use “Add Tile” to search the existing catalog and drop each tile into its Section — no new target mappings or SICF work needed, you’re only re-arranging tiles that already work.
2	Create the 6 Spaces	Open Manage Launchpad Spaces → New Space for each of the 6 names above, and assign the matching Page to each Space.
3	Assign Spaces to roles	In each Space’s assignment tab (or via PFCG), assign the Space to the PFCG role(s) of the team that should see it. A user who holds two roles — e.g. a supervisor who is both Production and Management — will simply see both Spaces as tabs.
4	Test as each role	Log in as one test user per role (or use “Adapt UI & Preview” if available) and confirm the right Space appears with all its tiles working.
5	Retire the flat catalog assignment	Once every role has its own Space and you’ve confirmed access, remove the old single “KGPL CUSTOM APPS” catalog/group from general user roles so people land on their new Space instead of the old flat list.

Visual polish that reads as “corporate-grade”

Item	Why it matters
Normalize subtitle casing	Right now subtitles mix “Kejriwal master data”, “KEJRIWAL Custom”, “Kejriwal Analytics”, “eInvoice/eWay Bill”, “Release SO”, etc. Pick one consistent pattern — e.g. always “Kejriwal – Master Data”, “Kejriwal – Quality”, “Kejriwal – Compliance” — and update every tile’s Info/subtitle field in the catalog to match. This is the single change with the biggest visual payoff for the least effort.
Cap tiles per Section	Keep each Section to roughly 6–8 tiles. If a Section (like Statutory & Tax above) is pushing past that, split it into two Sections rather than letting it run long.
Use dynamic/KPI tiles for the Analytics & Management Space	Where the underlying OData service supports it, switch the Executive Dashboard tiles from flat static tiles to dynamic tiles showing a live count or number (e.g. “Pending Contracts: 12”). This is what makes a management landing page look like a dashboard instead of a folder of shortcuts. Optional, not required for the first rollout.
Consistent icon families	Group icons by function so the eye can scan a page quickly — e.g. all master-data tiles on one consistent icon style, all QC tiles on the same icon family, all register/analytics tiles on the same family. A few tiles currently use unrelated generic icons (Release Sales Order, Upload Journal Entries) that break the pattern.
Corporate theme	Apply your own color palette and logo through the Fiori Launchpad theme settings (UI Theme Designer) so the shell header and tile background match Kejriwal’s branding instead of the default SAP Horizon theme. Do this last, after the Space/Page structure is finalized.
Turn off end-user personalization on shared Spaces	For the Production, Packing, and Sales Spaces, consider disabling “Add Tile / Move Tile” self-service so every user in that role sees the exact same, IT-curated layout — this is what makes a launchpad look deliberately designed rather than ad hoc per user.

Recommended starting point: build Space 1 (Production & Quality) end-to-end first — it’s the smallest, and it lets you validate the Page/Section/tile-reuse mechanics before repeating the pattern five more times. Once that one Space looks right, the rest is largely copy-and-adjust.
