

KGPL — Basis Handover: Activating Phase 1 Standard Fiori Apps

System KSD (host kejerpd4) · client 500 · S/4HANA 2025 · 23 Jul 2026. For the Basis / security team. Covers the standard SAP Fiori apps that replace the retired Z-transactions in Phase 1 (route-to-standard) and what must be activated on this fresh Initial-Shipment system to make them reachable in the Fiori Launchpad.

1. Current state & why nothing shows

The Phase 1 clean-core review routed 10 Z-transactions to standard SAP apps (no custom build). On KSD these apps are **delivered but not yet reachable** in the FLP. User **MD** currently has only these roles:

ZRFCCALL, ZS_RFCACL, ZKGPL_ALL, ZKGPL_ADMIN, **SAP_BR_EMPLOYEE**, ZFIORIADMIN

The only standard business role is **SAP_BR_EMPLOYEE** (Employee self-service) — so the FLP home shows only Timesheet / Learning / Teams tiles. No purchasing / finance / QM / billing standard apps are assigned, hence they are absent. Making them available is **role + service activation**, not development.

2. App → standard business role → business catalog

Recommended: assign the standard **business role** (it bundles the business catalog + launchpad space). Catalog IDs are the primary catalog per area (exact suffix confirmed from the role on KSD).

Z-tcode (retired)	Standard app(s)	Business role to assign	Business catalog (area)
ZMINMAX	Manage Material Master; Mass Maintenance	SAP_BR_BRODMASTER_SPECIALIST (or SAP_BR_BRODMASTER)	SAP_MM_BC_MMMASTER_*
ZBOE	Manage Customer/Supplier Line Items; Post	SAP_BR_ACCOUNTS_SPECIALIST (or SAP_BR_ACCOUNTS)	SAP_GL_ACCOUNTING/BE_GL_ACCOUNTANT
ZEXN	Manage Billing Documents; Create Billing Documents	SAP_BR_BILLING_CLERK (or SAP_BR_BILLING)	SAP_SD_BC_BILLING_*
ZINSLOT / ZQAR	Manage Inspection Lots; Results Recording	SAP_BR_QUALITY_ENGINEER (or _TECHNICAL)	SAP_QM_BC_INSPPROC_*
ZPR	Manage / My Purchase Requisitions	SAP_BR_PURCHASER (pro) / SAP_BR_EMPLOYEE PROCUREMENT (SSP)	SAP_MM_BC_PO_*
ZPOCLOSE / ZPOCLOSE	Manage Purchase Orders (delivery / final-invoice)	SAP_BR_PURCHASER	SAP_MM_BC_PO_*
ZRFQ	Manage RFQs; Manage Supplier Quotations	SAP_BR_PURCHASER / SAP_BR_BUYER	SAP_MM_BC_RFQ_* / sourcing
ZSOL_AUTOPAY	Manage Automatic Payments; Schedule Accounts Payable	SAP_BR_ACCOUNTS / SAP_BR_APSMANAGER	SAP_FSCM_AP_PAYMT_*
ZPDF	(not an app) standard Output Management (BRF+ / Adobe forms)	—	— (config, stays classic)

Note: ZINSLOT and ZQAR use the same QM apps; mass results recording is already covered by the built custom app “Record Inspection Results (Mass)”. ZPDF is output configuration, not a tile.

3. Prerequisites on this fresh system (one-time)

Because KSD is a fresh Initial-Shipment system, the Fiori foundation may not be fully activated. Verify/complete before role assignment:

3a. Gateway basic configuration

- STC01 → run task list **SAP_GATEWAY_BASIC_CONFIG** (system-wide, one-time). Enables OData/local publishing. (Same blocker seen for the custom V4 bindings.)
- STC01 → **SAP_FIORI_FOUNDATION_S4** (Fiori foundation: launchpad, spaces/pages, app index).

3b. Activate the apps' OData services & ICF nodes

- Rapid activation of the apps via task list **SAP_FIORI_CONTENT_ACTIVATION**, or per-role using the **Fiori Apps Reference Library** → each app's “Implementation” tab lists the OData service(s), ICF node and business catalog.
- OData V2 services: **/IWFND/MAINT_SERVICE** (add & activate). OData V4: **/IWFND/V4_ADMIN** → Publish Service Groups (System Alias LOCAL).
- Activate required **SICF** services (SICF → activate the app + resource nodes under /sap/bc/ui5_ui5/sap and /sap/opu/odata).

3c. Launchpad spaces & app index

- Ensure **Spaces & Pages** is on (SPRO / parameter). Standard roles ship their own spaces.
- Run **/UI5/APP_INDEX_CALCULATE** (full) after content activation so tiles resolve (this also fixes the “Manage Launchpad Pages” error noted earlier).

4. Role assignment (per area needed)

- 1 **PFCG**: copy each required SAP_BR_* role to a Z-namespaced copy (e.g. SAP_BR_PURCHASER → **ZBR_PURCHASER**). Do not assign SAP-delivered roles directly — they get overwritten on upgrade.
- 2 In the Z copy, maintain **org-level authorizations** (company code, plant, purchasing org, sales org) and generate the profile.
- 3 Confirm the role's **launchpad space/page** assignment (Menu tab → Fiori Launchpad Space).
- 4 Assign the Z role to the relevant end users (or to MD for testing).
- 5 The apps + their space appear automatically at next FLP login — no manual tile/catalog wiring.

5. Verification

- 1 Log in as a test user with the new Z role → the area's space (e.g. "Procurement") and its apps appear.
- 2 Open one app (e.g. Manage Purchase Requisitions) → data loads = service + auth OK.
- 3 Cross-check against the Fiori Apps Reference Library "Implementation" tab if an app tile is missing (usually a missing OData service activation or SICF node).

Companion docs in the Fiori-Apps repo: [docs/PHASE1_ROUTE_TO_STANDARD.md](#) (the routing decisions), [docs/KEJRIWAL_Fiori_Build_Plan.pdf](#) (overall plan), and [docs/KEJRIWAL_FLP_Fix_Runbook.pdf](#) (the FLP pinning / app-index / publish fixes). Exact catalog technical IDs per app can be read from the role definition (PFCG → Menu, or table AGR_HIER) once the roles are copied — or from the Fiori Apps Reference Library.
