

KGPL — Phase 4: Document & Reporting Compliance (DRC) Adoption

System KSD · client 500 · S/4HANA 2025 · 23 Jul 2026. For the TAX and BASIS teams. **This is a configuration & compliance project, not a development build.** Retire the custom India e-invoice / e-way-bill cockpit and excise registers; adopt the standard SAP DRC + eDocument solution (SAP-delivered, statutory-maintained). No custom Fiori apps are built for this.

1. Why move to standard DRC

The custom cockpit (ZEINV*) integrates with the government IRP via bespoke ABAP + a custom API/login and audit table. Standard **DRC + eDocument** does the same on SAP-maintained legal content: an eDocument is created automatically on billing, submitted to the IRP, and the IRN / signed QR / e-Way Bill are returned and stored - managed in the standard eDocument Cockpit. Future statutory/schema changes are handled by SAP as a compliance service. Net: less risk, no custom maintenance, always compliant.

2. What is retired (~19 tcodes + tables)

E-Invoice / E-Way cockpit → standard eDocument/DRC

Custom tcode	Was	Standard replacement
ZEINV	E-Invoice/E-Way Cockpit	eDocument Cockpit (EDOC_COCKPIT) / Manage Compliance Documents
ZEINV_EXT	Extract	Automatic eDocument creation on billing (no manual extract)
ZEINV_CANC / ZEWAY_CANC	Cancel e-inv / e-way	Cancel from the eDocument cockpit
ZEINV_EWAY_BY_IRN	e-Way from IRN	Standard e-Way-from-IRN step in the India process
ZEINV_UPDATE / _UPLOAD / _UPGRADE	IRN upload, FY update	Not needed - IRN/EWB posted back automatically via the API
ZEINV_SETUP	Setup cockpit	Standard eDocument/DRC customizing (SPRO)
ZEINV_CO_CODE/ DOCTYP/ STATE_CODE/ UOM/ LOGIN	Config codes	Standard eDocument config + IRP credentials per GSTIN
ZAUDIT_LOG (+ ZEINV_AUDITLOG)	Audit report/table	eDocument status/history is standard; Phase-3 query ZC_AUDIT_LOG bridges legacy o

Excise registers (ride along)

Custom tcode	Was	Decision
ZRG1 / ZRG1N / ZRG1TEX	RG1 excise register	RETIRE - central excise subsumed by GST (2017); legacy unless a still-excisable prod
ZJ1IIN	Auto excise invoice	Retire with the excise registers (GST regime)
ZPUREG	Purchase register	Use DRC GSTR reporting / a standard purchase register query

3. Setup checklist (Basis + tax, config only)

3a. Prerequisites / connectivity

- 1 Activate **eDocument** and **DRC** frameworks (SPRO → Cross-Application Components → General Application Functions → Document and Reporting Compliance).
- 2 Establish IRP connectivity via **SAP Localization Hub / digital compliance service for India** or a **GSP/ASP** connector (legal gateway to the government IRP) - replaces the custom API in ZEINV.
- 3 Digital signature / API credentials per **GSTIN** (was ZEINV_LOGIN).

3b. eDocument process config

- 1 Activate the **source type** (SD billing) and **eDocument type** for India eInvoice + eWay; assign to company codes / billing types (was ZEINV_CO_CODE / ZEINV_DOCTYP).
- 2 Interface type / communication (SOAP/REST to the connector); number ranges.
- 3 Map UoM and state codes to the government code lists (was ZEINV_UOM / ZEINV_STATE_CODE).

3c. Roles

- 1 Assign the standard DRC/compliance business roles (tax specialist) so **eDocument Cockpit / Manage Compliance Documents / Run Compliance Reports** appear in the FLP - same PFCG role-copy pattern as the Phase 1 Basis handover.

3d. Cutover & parallel run (tax-team led)

- 1 Pick a cutover date; freeze new ZEINV usage after it.

- 2 Run DRC eInvoicing in **parallel** on a sample of live invoices; reconcile IRN / eWay numbers against the legacy ZEINV_AUDITLOG (via the Phase-3 audit query).
- 3 Sign-off → switch off ZEINV* tcodes; keep custom tables read-only for the statutory retention period, then archive.

Effort: a separate compliance project (weeks; tax-team-led config + testing), not part of the app-build track. No ABAP. Confirm the RG1/excise decision with tax before retiring those registers. Companion: docs/PHASE4_DRC_SCOPE.md and the Phase-3 ZC_AUDIT_LOG query (bridges legacy audit data during the parallel run).
